

RogerSVC is a software package which consists of Windows services and services managing program for RACS 5 system.

Services and programs included in RogerSVC:

- *License service* verifies RACS 5 license and monitors the hardware key.
- *Communication service* enables communication between RACS hardware and software as well as ensures additional communication processes such as continuous collection of events from devices and their storage in database.
- *Virtual controller service* offers additional logic layer to the RACS 5 system. In particular it enables configuration of global reactions of the system for certain situations and it offers specific functionalities which are provided beyond hardware access controllers. The examples include PoS (Point of Sale) and Asset tracking (e.g. Management of keys) under control of RACS 5 system.
- *Web app service* enables RACS 5 management with VISO Web app accessible from web browser.
- *Integration service* enables access to RACS 5 database and system by third party programs. The server is based on WCF (SOAP) framework and it significantly simplifies and standardises possible software integration with RACS 5 system by third parties.
- *RACS Services Manager* is Windows program for management of RACS 5 services and management of database connections.
- *RogerSVC services* can be run on any workstation connected to local area network.
