

RACS Display is an Android mobile application which allows using the screen of a mobile device (e.g. tablet) as a text display of messages generated by the RACS 5 access control system. In particular, the application can be used to display the number of free or occupied places in the selected RACS 5 attendance zone (e.g. car parking). Displayed data is taken from the access system via Integration Server and can be presented along with an additio-

nal message (text), which facilitates understanding of the displayed message. The application operates in so-called kiosk mode, which protects the mobile device from other activities than the RACS Display app. The application can be launched on any mobile device with Android v4.4, including TV Box devices operating with an external screen or monitor of any size.
